Keithley Instruments: solutions for device characterization

From wafer to devices, how Keithley instruments can help you through the different stages of your project

Enrico Citti

**High Speed Signals Symposium
Israel 2023**

Keithley Instruments Inc.

COMPANY OVERVIEW

Founded in 1946 by Joseph F. Keithley in Solon, Ohio.

You can spot “The Low-Level Measurements Handbook” in many Physics Depts. or Semiconductor Companies

<https://www.tek.com/document/handbook/low-level-measurements-handbook>

<https://www.electronicdesign.com/technologies/test-measurement/article/21795626/joseph-f-keithley-quality-service-innovation-integrity-qsii>

High Speed Signals Symposium

Agenda

The word 'Agenda' is written in a large, bold, black sans-serif font. To its left is a graphic consisting of several parallel, slanted blue lines of varying lengths, creating a sense of motion or a list.

1. The R&D bench: power supplies, DMMs, ELoads and Multiplexers
2. Device and process characterization tools
3. Sensitive and accurate instrument

Basic bench needs

What are the customer pain points?

HAVE A LOOK AT A DESIGNER'S BENCH...

For sure you can spot the following instruments:

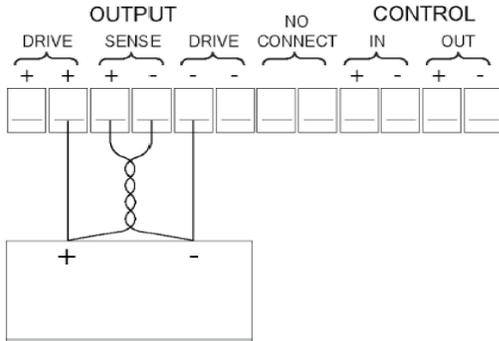

- Power supplies
- Multimeters
- Oscilloscopes
- Signal generators

Single and Multi-Channel Power Supplies

2200 – 2220 – 223x

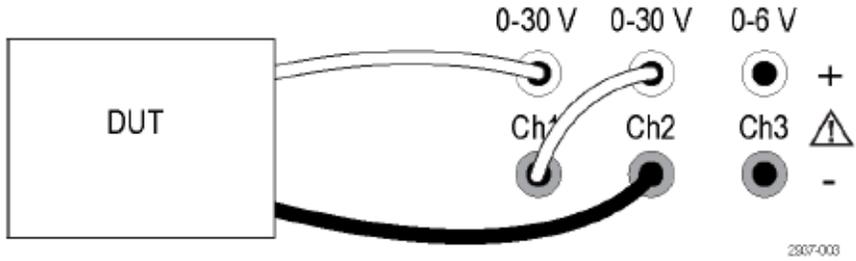

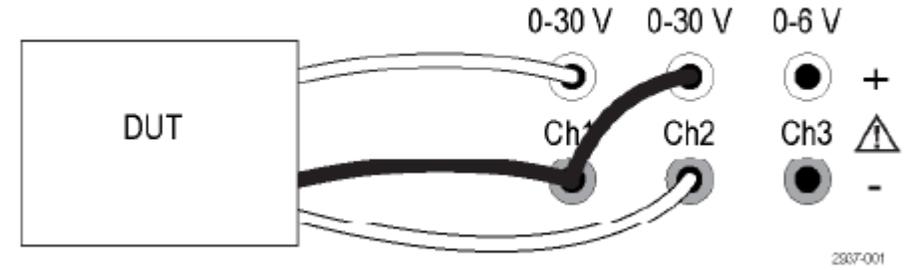

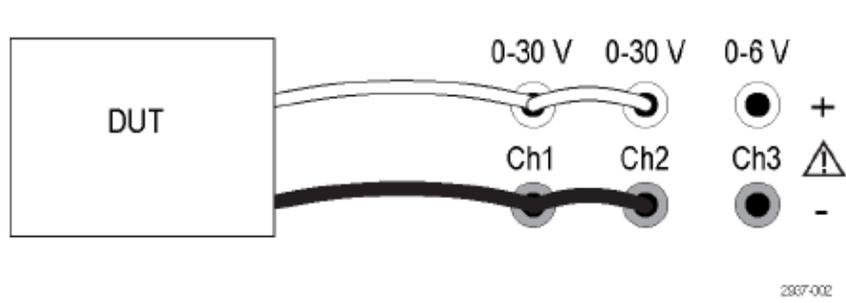

Model	Channel	Power	Vout	Iout	Remote Interface	Kickstart Support	Topology	Remote Sense	Setting Resolution	DUT protection	Other Features

power?**

2260B

On the 2260B, the internal resistance of the power supply can be user-defined in software. (Internal Resistance Setting, page 87). When the internal resistance is set it can be seen as a resistance in series with the positive output terminal. This allows the power supply to simulate power sources that have internal resistances such as lead acid batteries.

Series and Parallel Operation

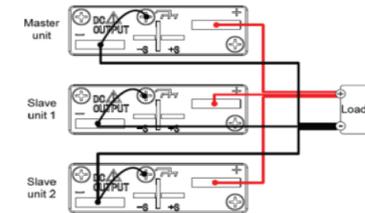

Series connection of 2 supplies

Double the output voltage to 60V or 160V

Note: 30V and 80V models only

Parallel connection of 3 supplies

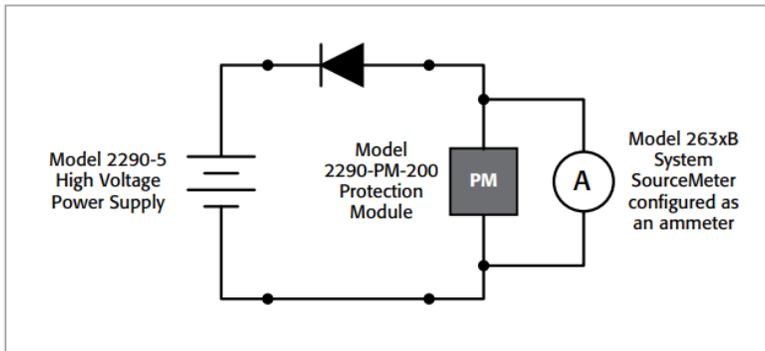

Triple the output current up to max. 324A

Special applications power supplies

2290-x

Model	Channel	Power	Vout	Iout	Remote Interface	Kickstart Support	DUT protection	Topology
2290-5	1	25W	+50 - +5000V	5mA	GPIB	NO	Max Volt OVP OCP	Switching

Reverse breakdown testing of a high voltage diode using a Keithley SourceMeter SMU instrument to measure leakage current. The 2290-PM-200 SMU Protection Module protects the SourceMeter SMU instrument from high voltage when the diode breaks down.

Model 2290-5 **5kV** Power Supply

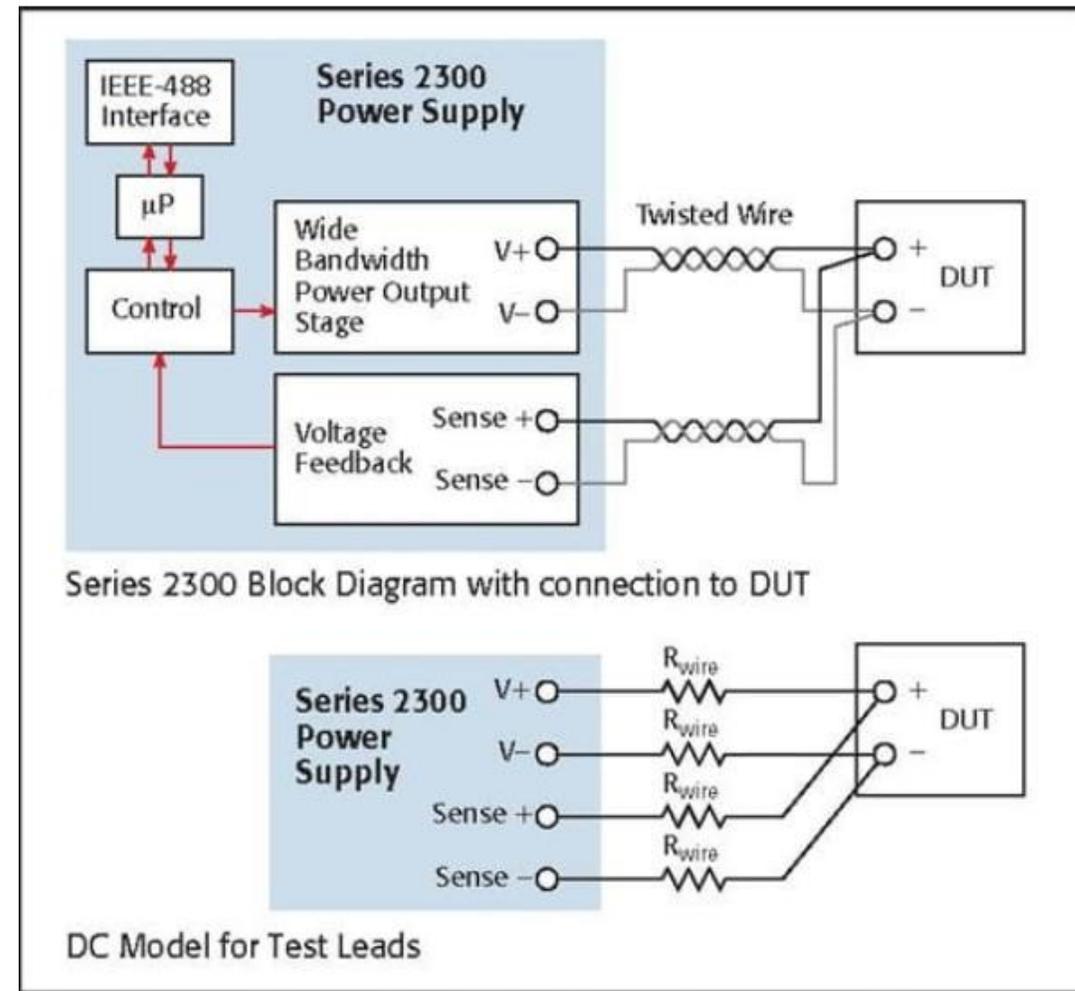

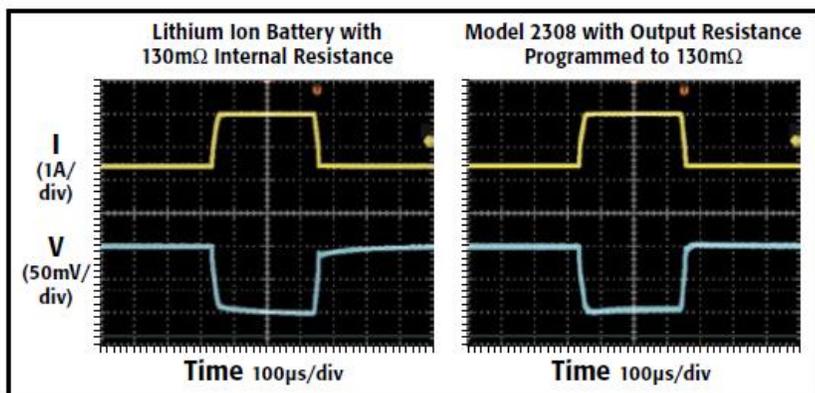

- +50V to +5,000VDC
- Up to 5mA current output (25W)
- 1µA current measurement resolution
- Ultra-low output noise; 3mVrms @5kV with output filter enabled
- Safety interlock
- GPIB interface

Model 2290-10 **10kV** Power Supply

- +100V to +10,000VDC
- Up to 1mA output (10W)
- 1µA current measurement resolution
- Low output noise; 1Vrms maximum
- Safety interlock
- RS-232 and GPIB interfaces

Electronic Loads

Series 2380 electronic Loads

CONVENIENT BENCHTOP TESTING

Feature	Benefit
25kHz Dynamic Load Cycling	Test power sources that have to respond to fast-changing loads
Independent Instrument in 2U, 1/2-Rack benchtop case (200W and 250W models)	Convenient form factor for a designer's bench. No need to buy a mainframe and modules.
Multiple Interfaces, USB, GPIB, and RS-232 are standard	User has interface options
Wide range of Operating modes: CC, CV, CR, CP, Battery Test, LED Test	Flexibility to test a wide range of power conversion devices with convenient setups for testing batteries and LED drivers
0.05% Basic Measurement Accuracy Resolution as low as 0.1mV and 10uA	Easily see small changes

3731	6x16	Matrix	Dry reed	2 Form A	200 V	1 A	Relay actuation time of 0.5 ms. Columns can be expanded through the backplane or isolated by relays
3732	448 crosspoints (Quad 4x28)	Matrix	Dry reed	1 Form A	200 V	0.75 A	Banks can be connected together via bank configuration relays to create a single 4x112 or dual 4x56 matrix. Analog backplane relays also included for card-to-card expansion. Row expansion with 3732-ST-R accessory to create a dual 8x28 or single 16x28 matrix.
3740	32	Independent	Latching electromechanical	28 Form C, 4 Form A	300 VDC/ 250 VAC (Form A)	2 A (Form C), 7 A (Form A)	32 general purpose independent channels.
3760	10	Multiplexer	Nonlatching electromechanical	2 Form C	500V	5 A	Single 1x10 high current multiplexer
3761	10	Multiplexer	Dry reed	Form A	30 V	100 mA	Single 1x10 low current multiplexer
3762	10	Multiplexer	Dry reed	2 Form A	1000 V	0.5 A	Single 1x10 high voltage multiplexer
3765	4x5	Matrix	Nonlatching electromechanical and dry reed	Form A	8 V	100 mA	Specialty 4x5 matrix for Hall Effect and van der Pauw measurements.

Kickstart Software

CONTROLLING DMMS, MULTIPLEXERS AND POWER SUPPLIES

The screenshot displays the Kickstart Software interface for a new project. The main window is titled "Data Logger-1" and shows a scan sequence of four measurements: DC Voltage (1001 - 1003...), DC Voltage (1038,1040 - ...), DC Voltage (1029 - 1035), and Temperature (2024 - 2029...). A "Scan" button is at the top left of the sequence. A detailed configuration window for the first DC Voltage measurement is open, showing settings for Range (Auto), NPLC (1), Units (V), Channel (1001), and Name (1001). The "Measurement Settings" window for the DMM-1 is also visible, showing DC Voltage, Range (Auto), NPLC (1), Auto Zero (On), Units (V), Trigger Mode (Immediate), and various limit and filter options.

High Speed Signals Symposium

Characterizing your devices

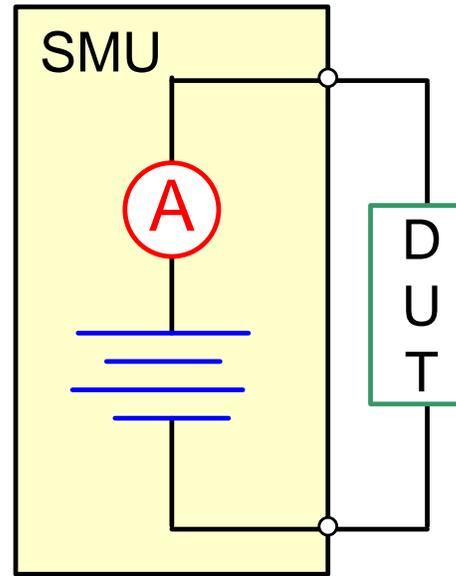

What is an SMU?

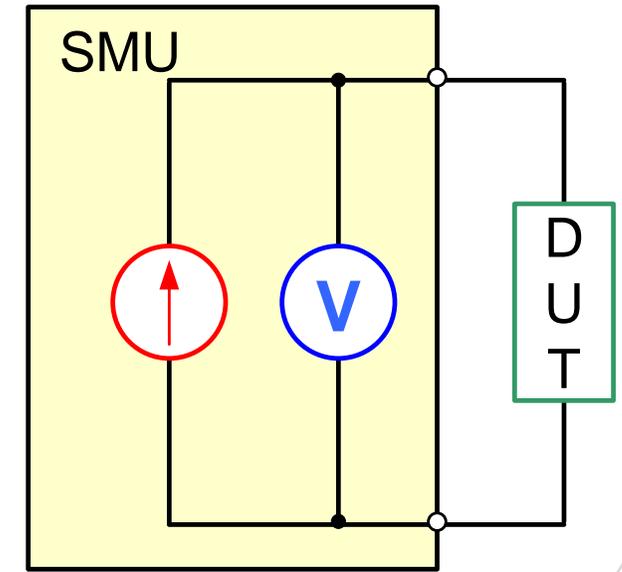

DC I-V characterization of electronic devices are often performed by Source Measure Units, or SMU.

An SMU is a single instrument that can:

- Source voltage and measure current
- Source current and measure voltage

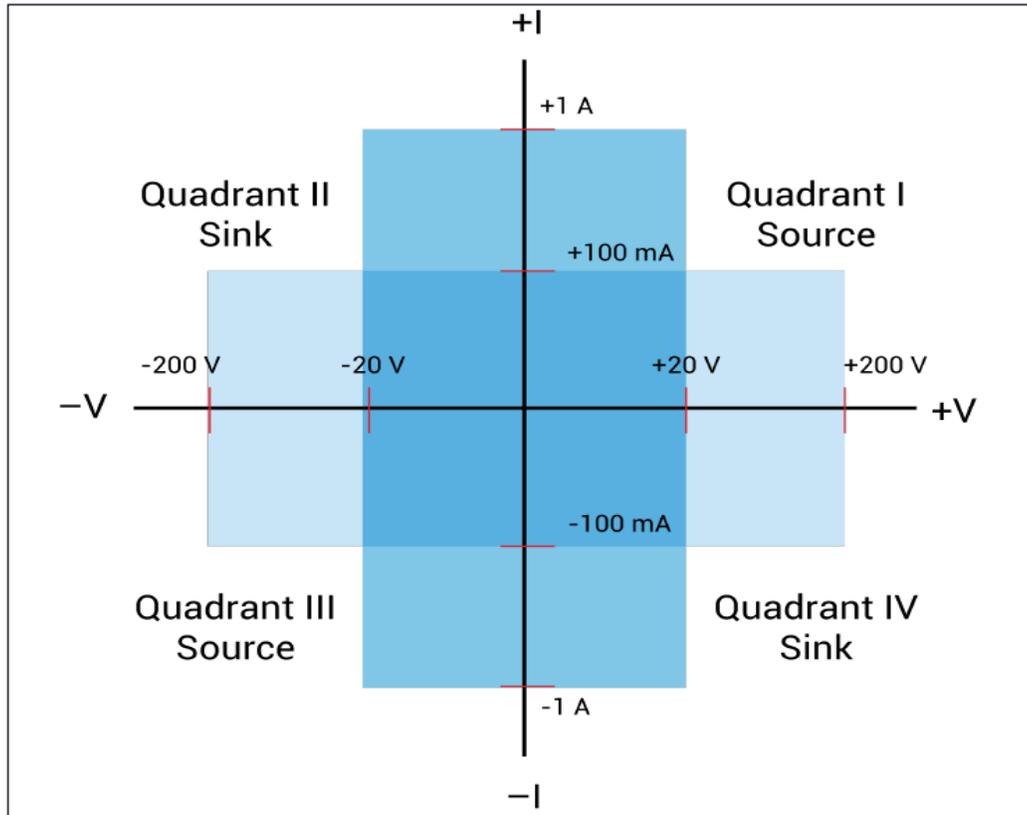

Source V, Measure I

Source I, Measure V

Four Quadrant Operation: Source and Sink

4200A SMU Operating Boundaries

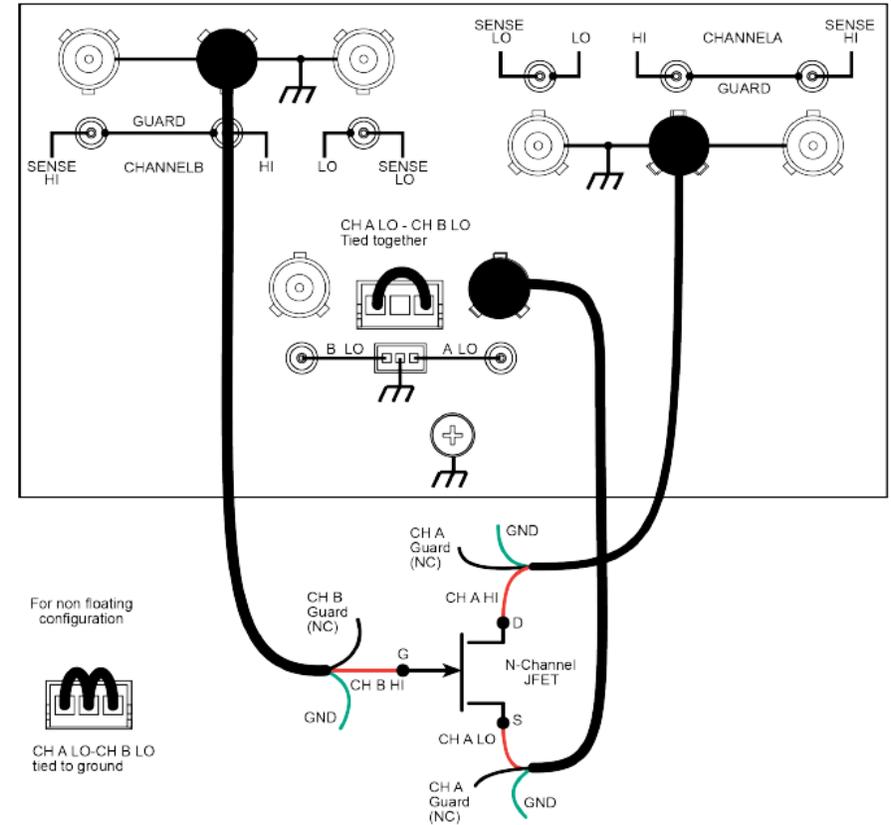

High Speed Signals Symposium

SMUs can operate in one of four quadrants:

- Quadrants I and III are sourcing (I and V have same polarity):
 - **Sourcing SMUs deliver power to load.**
 - **Apps: device characterization, resistivity, sensors**
- Quadrants II and IV are sinking (I and V have different polarity):
 - **Sinking SMUs dissipate power.**
 - **Apps: batteries, solar cells**

SMU IV characterization

HIGH SPEED SYSTEM SMUS FOR DEMANDING APPLICATIONS

Series 2600B System SourceMeter SMU Instruments

- Tightly integrated, 4-quadrant voltage/current source and measure instruments offer best-in-class performance with 6½-digit resolution
- Family of models offers industry's widest dynamic range:
- 10 A pulse to 0.1 fA and 200 V to 100 nV
- TSP technology embeds complete test programs inside the instrument for best-in-class system-level throughput
- TSP-Link® expansion technology for multi-channel parallel test without a mainframe
- Complete production test without sacrificing footprint
- USB 2.0, LXI-C, GPIB, RS-232, and digital I/O interfaces

TOUCH TEST INVENT 24XX

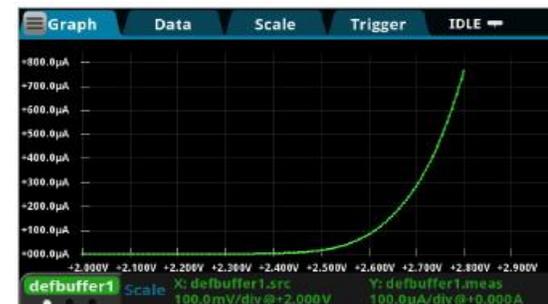

TOUCH, TEST, INVENT WITH A GRAPHICAL TOUCHSCREEN SMU

2450, 2460, 2461, and 2470 SourceMeter SMU Instruments

- Five-inch, high resolution capacitive touchscreen GUI
- 0.012% basic measure accuracy with 6½-digit resolution
- Wide coverage up to 1100 V, 7 A DC, 10 A pulse, 1000 W max.
- Source and sink (4-quadrant) operation
- Dual 1 MS/s digitizers for fast sampling measurements (2461 only)
- Enhanced sensitivity with 20 mV and 10 nA source/measure ranges (2450 only)
- Built-in, context-sensitive front panel help
- SCPI and Test Script Processor (TSP®) programming modes
- Front-panel USB 2.0 memory I/O port for transferring data, test scripts, or test configurations

Keithley Family of SMU - Instruments

265XA

2651A 50 Amp High Power System SourceMeter SMU Instrument

- Source or sink:
 - 2,000 W of pulsed power (± 40 V, ± 50 A)
 - 200 W of DC power (± 10 V @ ± 20 A, ± 20 V @ ± 10 A, ± 40 V @ ± 5 A)
- Easily connect two units (in series or parallel) to create solutions up to ± 100 A or ± 80 V
- 1 pA resolution enables precise measurement of very low leakage currents
- 1 μ s per point (1 MHz), 18-bit sampling, accurately characterizes transient behavior
- 1% to 100% pulse duty cycle for pulse width modulated (PWM) drive schemes and device specific drive stimulus

[2651A LEARN MORE](#)

2657A 3000 Volt High Power System SourceMeter SMU Instrument

- Source or sink up to 180 W of DC or pulsed power, (± 3000 V @ 20 mA, ± 1500 V @ 120 mA)
- 1 fA low current resolution
- Dual 22-bit precision ADCs and dual 18-bit 1 μ s per point digitizers for high accuracy and high speed transient capture
- Fully TSP[®] compliant for easy system integration with Series 2600B System SourceMeter models and 24XX Graphical SMUs

Failure Analysis

A TASK FOR 4200A-SCS

APPLICATION NOTE

Nanoprobing SEM Solution for In Situ Semiconductor Failure Analysis

Failure analysis measurements for automotive industry are conducted to identify and localize fabrication defects in transistors and integrated circuits interconnections. Resistivity measurements, transistor characterization, EBIC and EBAC are here performed with Imina Technologies nanoprobing platform and successfully used to achieve this goal.

In collaboration with:
 Fraunhofer CAM
 Halle, Germany
www.cam.fraunhofer.de

Imina Technologies products in use:
 – miBot™ BT-14 nanomanipulator
 – Nanoprobing SEM Platform kit

In this example, PMOS transistor characteristics were measured with the nanoprobing method. First metallization levels were removed by chemical-mechanical polishing in order to isolate a single transistor and to have access to alumina metal lines. Then, four tungsten needles were put in contact with the source, drain, gate and well nodes of the transistor [Figure 5]. A Keithley 4200 SCS semiconductor characterization system was used to generate I/V curves of source and drain for several gate voltage potentials [Figure 6].

High Speed Signals Symposium

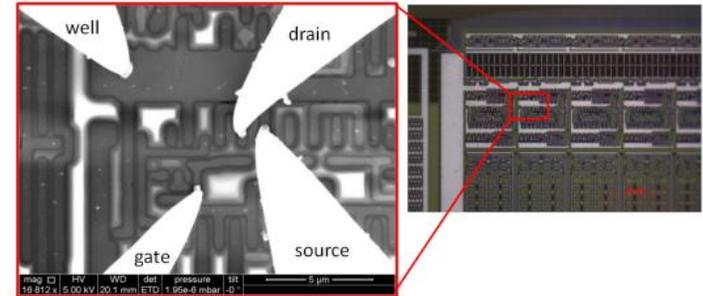

Figure 5. Electrical probing of a single PMOS transistor.

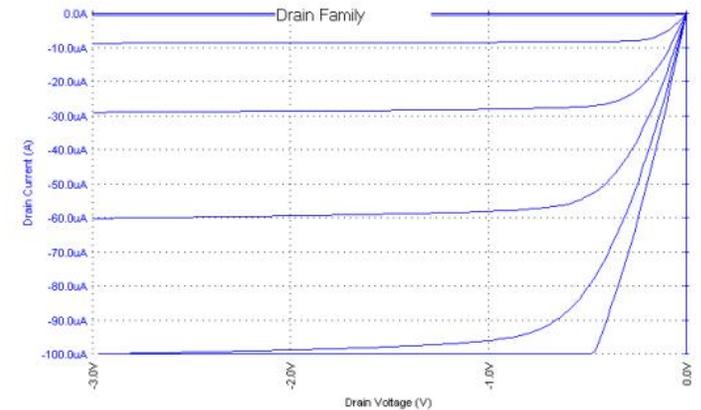

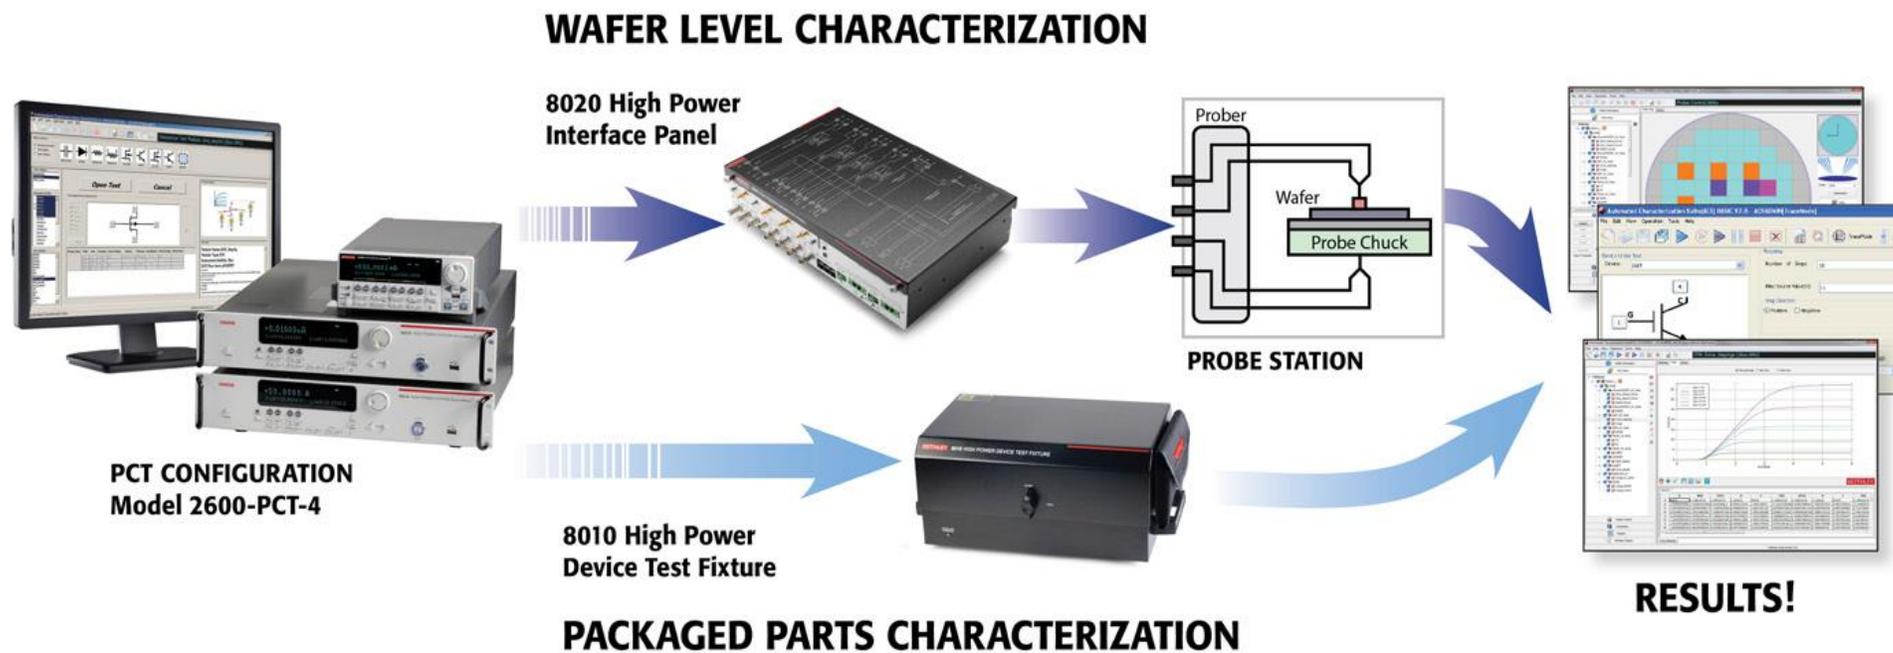

Figure 6. Transistor characteristics: I/V curves function of different gate voltage potentials.

High Voltage and High Current Characterization

2600 – PCT - xB

2600 – PCT - xB

Configuration Selector Guide

Model ¹	Collector/ Drain Supply ²		Step Generator Base/Gate Supply	Auxiliary Supply
	High Voltage Mode	High Current Mode		
Low Power 2600-PCT-1B	200 V/10 A	200 V/10 A	200 V/10 A	N/A
High Current 2600-PCT-2B	200 V/10 A	40 V/50 A	200 V/10 A	200 V/10 A
High Voltage 2600-PCT-3B	3 kV/120 mA	200 V/10 A	200 V/10 A	200 V/10 A
High Current and High Voltage 2600-PCT-4B	3 kV/120 mA	40 V/50 A	200 V/10 A	200 V/10 A

1. Contact your Keithley field applications engineer for custom configurations.
2. Add a Model 2651A to increase high current mode to 50A or 100A.
3. PCT-CVU Multi-Frequency capacitance meter can be added to any configuration.

Parametric testing

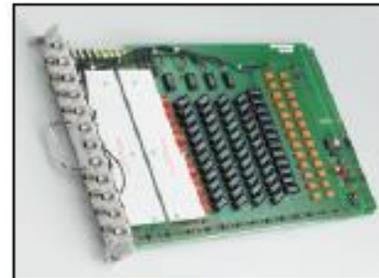

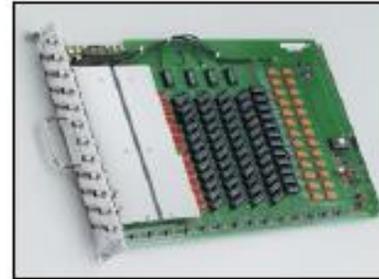

S5xx systems

Switch matrix mainframes

707B/708B

Model 7174A Low Current Matrix Card: This 8×12 card is designed for semiconductor research, development, and production applications that demand high quality switching of I-V and C-V signals. Its low leakage and minimal dielectric absorption ensure that key device measurements can be performed many times faster than with earlier switching technologies. Its superior low current performance makes it ideal for use with both Models 2635B and 2636B System SourceMeter® SMU Instruments for adding high speed I-V source and measurement capabilities and for accessing the I-V and C-V measurement capabilities of the Model 4200-SCS Parameter Analyzer.

Model 7072 Semiconductor Matrix Card: This 8×12 switch supports the low level and high impedance measurements encountered in semiconductor parametric tests on wafers and devices. It provides two low current paths with just 1pA maximum offset current for sensitive sub-picoamp measurements, and two other paths optimized for measuring C-V characteristics from DC to 1MHz. Four more high quality signal paths with <20pA offset current provide for general-purpose signal switching up to 100nA or 200V.

Model 7072-HV High Voltage Semiconductor Matrix Card: Like the Model 7072, the 7072-HV is designed to handle low level, high voltage, and high impedance signals. It provides two signal paths capable of switching 1300V with less than 1pA of offset current, so it's ideal for switching the high voltage signals encountered in breakdown measurements or oxide integrity testing. Two paths are optimized for C-V measurements from DC to 1MHz or for switching low currents with a common ground. Four additional high quality signal paths with less than 20pA offset current provide for signal switching to 200V.
